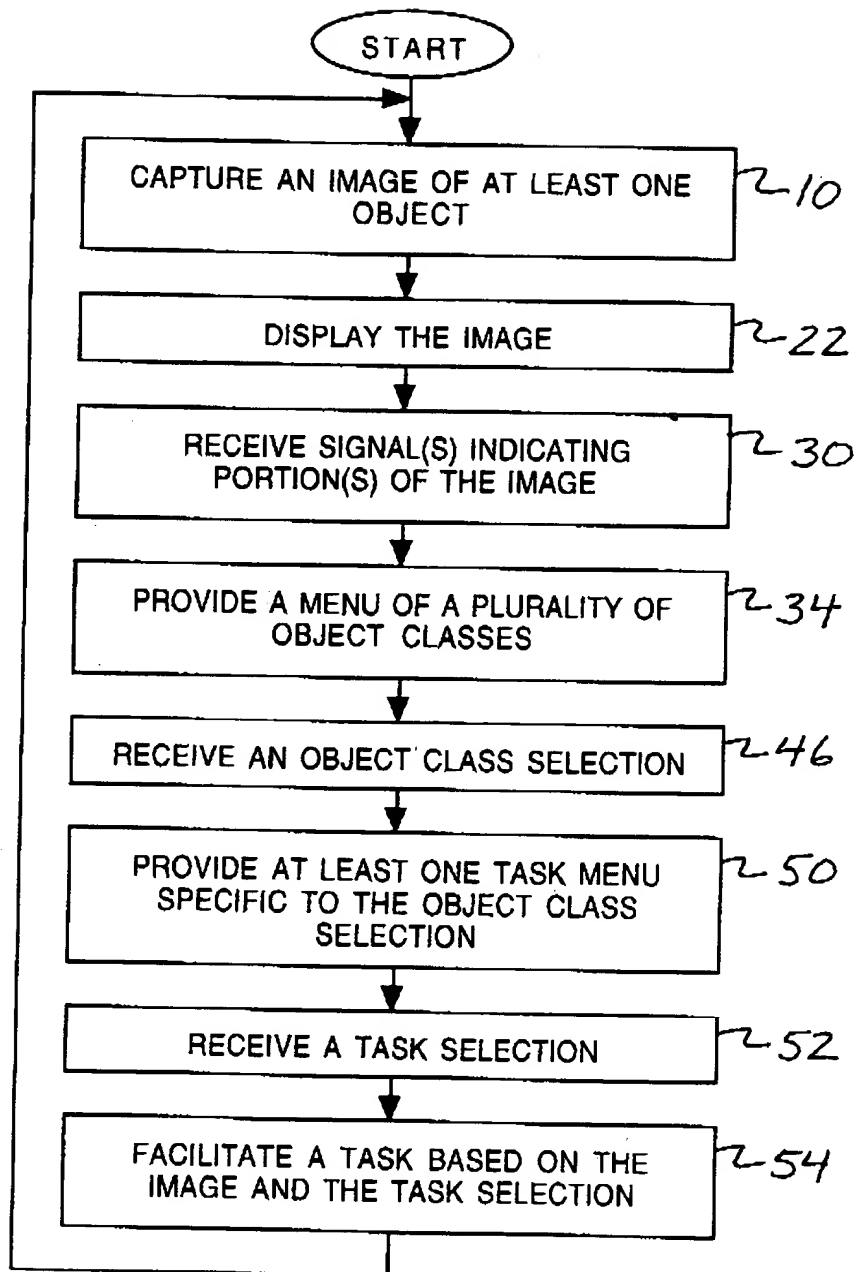

FIG. 1

The diagram illustrates a network access apparatus (20) and a server system (40) connected via a computer network (42). The network access apparatus (20) includes a display device (24), a user input interface (32), a processor (26), memory (36), a transceiver (44), and a digital camera (16). The digital camera (16) is positioned to capture a scene (12) containing at least one object (14). The server system (40) includes an optical code detector (62), an object recognizer (56), and a task facilitator (60). A resource (61) is also connected to the computer network (42).
